

detail of decoupled head (each level)

LEGEND
H x W = network input pixels (imgsz 1280)
s = level stride (8, 16, 32)
C_l = channels at that level (320 / 640 / 640)
4 = box sides, 16 = DFL bins per side
n = boxes kept by NMS
3 = RGB channels

C = 10 agent classes (Ped, Car, Cyc, Mobike, MedVeh, LarVeh, Bus, EmVeh, TL, OthTL)
anchor-free: 1 prediction per grid cell
box = 4 sides x 16 DFL bins
